DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

VISION OF THE INSTITUTION

TO MAKE THE INSTITUTION THE ONLY OF ITS KIND IN THE FIELD OF RESEARCH AND DEVELOPMENT ACTIVITIES IN THE PART OF THE WORLD.

MISSION OF THE INSTITUTION

TO IMPART HIGHLY INNOVATIVE AND TECHNICAL KNOWLEDGE TO URBAN AND REMOTE RURAL STUDENTS THROUGH "TOTAL QUALITY EDUCATION."

QUALITY POLICY

COMMITTED TO IMPART QUALITY TECHNICAL EDUCATION IMBIDED WITH PROFICIENCY, HUMAN VALUES AND CONTINUAL IMPROVEMENTS

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

VISION OF THE DEPARTMENT

TO MAKE THE DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING THE UNIQUE OF ITS KIND IN THE FIELD OF RESEARCH AND DEVELOPMENT ACTIVITIES IN THIS PART OF WORLD

MISSION OF THE DEPARTMENT

TO IMPART HIGHLY INNOVATIVE AND TECHNICAL KNOWLEDGE TO THE URBAN AND UNREACHABLE RURAL STUDENT FOLKS IN COMPUTER SCIENCE AND ENGINEERING THROUGH "TOTAL QUALITY EDUCATION".

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

PROGRAM EDUCATIONAL OBJECTIVES

PEO1

Apply the necessary mathematical tools and fundamental knowledge of Computer Science & Engineering to solve the variety of Engineering problems.

PEO2

Develop software based solutions for real life problems and be a leaders in their profession with social and ethical responsibilities.

PEO3

Pursue life-long learning and research in selected fields of Computer Science & Engineering and contribute to the growth of those fields and society at large.

PROGRAM SPECIFIC OUTCOMES

PSO1

Profession Skills: The ability to understand, analyze and develop computer Programs in the areas related to algorithms, system software, multimedia, web design, big data analytics, and networking for efficient design of Computer-based systems of varying complexity.

PSO2

Problem - Solving Skills: The ability to apply standard practices and strategies in software project development using open-ended programming environments to deliver a quality product for business success.

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

ABOUT THE DEPARTMENT

The Department of Computer Science and Engineering was established in the year 1998 with the initial intake of 40. The primary objective of our department is to provide "Total Quality Education" in the field of information and Communication Engineering, amid 120 students per year. Computer Science & Engineering, a dazzling department for ever is always a forerunner in impacting innovative & technical knowledge to the aspirants. The department of Computer Science and Engineering has excellent infrastructure facilities and is powered with the highly sophisticated lab with the higher configuration systems and servers with recent software updated to meet the demands of the IT industry, Research and Development organizations and computer related areas. The department offers an excellent academic environment with a team of highly qualified faculty who are technically sound and talented persons. Our faculty members monitor student's performance regularly and give moral support and motivation to them. Our department has a separate association called CYBERHEFT through which we conduct various technical events to student.

HOD'S MESSAGE

"Technology is the driving force behind the evolution of our world, and at the Department of Computer Science and Engineering, we are committed to nurturing the next generation of innovators, problem-solvers, and leaders who will shape the future. As we stand at the intersection of cutting-edge research and real-world applications, our mission is to empower students with the knowledge, skills, and mindset to tackle global challenges and create transformative solutions. This tech magazine serves as a testament to the incredible advancements and ideas emerging from our vibrant community. It is a platform to celebrate creativity, collaboration, and the relentless pursuit of excellence. Let us continue to push boundaries, embrace curiosity, and harness the power of technology to build a smarter, more connected, and sustainable world. To our students, faculty, and industry partners - your passion and dedication inspire us every day. Together, let's keep innovating, learning, and leading the way in the ever-evolving landscape of technology."

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Dr. A. Meenakshi, Professor and Head of the Department of Computer Science and Engineering at Kamaraj College of Engineering and Technology, Near Virudhunagar, has over 25 years of teaching experience and nearly 15 years of research experience in the field of Computer Science and Engineering. She obtained her Master of Engineering in Computer Science and Engineering from Anna University, Chennai, and her Ph.D. in Information and Communication Engineering, specializing in Machine Learning, from the same university.

Dr. Meenakshi has published more than 15 papers in reputed national and international journals and presented over 20 papers at national and international conferences. She is a recognized research supervisor under the Information and Communication Engineering domain at Anna University, Chennai, and currently guides seven research scholars.

Her research interests include Big Data Analytics, Machine Learning, and Deep Learning. She is also a member of the Computer Society of India (CSI) and a life member of the Indian Society for Technical Education (ISTE).

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

WHEN AI STOPS JUST TALKING AND STARTS DOING THINGS

Most of us have gotten used to AI working in one specific way — you ask something, and it answers. Need help writing an outline? It gives you one. Stuck on a bug in your code? It suggests a fix, and you're the one who checks if it actually works. That's how it's been for a while now. AI has mostly been a helper, one step away from actually doing the work itself.

But that's slowly changing.

Just last week, I went to a gaming hackathon with my team. None of us really knew game development before that. When we actually sat down to build the game, we understood how hard it really is — making 3D models, getting the game to work properly — all of it took a lot of time and effort. What made it more interesting was that just the week before, we had heard about a new AI model that could create things like this in almost no time. So while we were struggling to finish our game manually, we kept thinking about how an AI agent could probably build something similar in just a few seconds. It was honestly surprising to think about.

This is what people are now calling "agentic AI." Once you start noticing it, you see it everywhere. It's not just AI replying to you anymore — it's AI that can actually take action and do the task. Some AI systems can now generate surprisingly complete game prototypes from a single prompt. They can fix code by themselves, not just suggest a fix. Some AI agents can even send an email instead of simply writing a draft for you to check.

Most of us probably assumed AI would always stay in that helper role, where we're the ones making the final decisions and doing the actual work. But that line is already getting blurry, and it's happening faster than we expected.

Here's the part that matters for us as CSE students, though. For a long time, the main skill was writing correct code and solving problems. That's still important, but it's not the only thing that matters anymore. The bigger question now is — can we build AI that knows when it should stop and ask, instead of just doing everything on its own?

Think about it this way. An AI that does exactly what it's told, instantly, without thinking twice, sounds efficient at first. But if you think about it more, it's actually a little scary. This happened in a real-world incident reported in July 2025. Replit's AI coding agent deleted a live production database belonging to SaaS founder Jason Lemkin's project, despite instructions to freeze changes. The agent later described its actions as a "catastrophic error in judgment" and said it had "panicked." The data was eventually recovered, but the incident showed what can happen when an AI agent has the ability to take actions without strong safeguards.

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Imagine an AI handling your UPI payments and approving every request the second it comes in, without asking, "Are you sure about this ₹50,000 transfer?" Or think about a delivery robot on campus that just moves forward without checking if someone is about to walk in front of it. Being fast is not the same as being safe. Nobody really wants an AI that's good at doing things but bad at knowing when to stop.

To me, this feels like a more important challenge than the flashy demos we usually see online. The real challenge is making a system pause and think, "Should I actually do this?" before it acts — kind of like how we hesitate before sending a message we're not fully sure about. Whether it's a robot, a self-driving car, or an AI assistant with access to our files, they all face the same decision: should they go ahead, or should they stop? Getting that right reliably is harder than simply making the AI capable in the first place.

For someone still in college trying to figure out where to focus, I think this is the real takeaway. It's not just about learning one more tool or getting better at DSA. It's about understanding how to build things that can handle uncertainty in a responsible way, because that's where a lot of real work is heading. None of us have it fully figured out yet, and that's okay. But it's worth paying attention to, because this shift — from AI that just talks to AI that actually acts — isn't something far away anymore. It's already happening, quietly changing how we work, one small task at a time.

That hackathon made me realize something simple: technology can change what is difficult today into something almost effortless tomorrow. Our job is to keep learning fast enough to change with it.

Maybe the real skill going forward isn't making AI do more. It's teaching it to know when not to.
