B.E. CIVIL ENGINEERING

Regulation - 2020

AUTONOMOUS SYLLABUS

CHOICE BASED CREDIT SYSTEM (CBCS)

CURRICULUM AND SYLLABI

(III & IV)

VISION

To make the Department of Civil Engineering, unique of its kind to promote education and research in the various fields of construction industry.

MISSION

To impart highly innovative and technical knowledge in the field of Civil Engineering to the urban and rural student folks through "Total Quality Education".

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

PEO 1:

Graduates of the program will be creative, able to apply scientific knowledge and computer aided design tools for technical problems in the field of Civil Engineering.

PEO 2:

Graduates of the program will be a professional Civil Engineer and/or will pursue higher education in various domains of Civil Engineering by taking competitive examinations.

PEO 3:

Graduates of the program will passionately perform as a competent team member, team leader and/or entrepreneur in the development of a sustainable environment.

PROGRAM OUTCOMES:

After going through the four years of study, the Civil Engineering graduates will have the ability to

	Graduate Attribute	Programme Outcome
1	Engineering knowledge	Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
2	Problem analysis	Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3	Design/development of solutions	Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4	Conduct investigations of complex problems	Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions
5	Modern tool usage	Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations
6	The engineer and society	Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice
7	Environment and sustainability	Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

8	Ethics	Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
9	Individual and team work	Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
10	Communication	Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
11	Project management and finance	Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
12	Life-long learning	Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAMME SPECIFIC OUTCOMES (PSOs):

PSO1 :

Graduating students will be able to deal complex problems in the field of Civil Engineering to achieve design solutions with modern technological approach and application software.

PSO2:

Graduating students will be able to understand the professional Civil Engineering practice and apply contextual knowledge with the appropriate consideration of the society and environment.

SEMESTER III

MA1373 TRANSFORMS AND PARTIAL DIFFERENTIAL EQUATIONS

L	T	P	C
3	1	0	4

OBJECTIVES

This course enables the students to

- To introduce the basic concepts of PDE used in solving partial differential Equations.
- To introduce Fourier series which plays a vital role in solving boundary value problems.
- To acquaint the students with Fourier transform and Z-transform techniques

UNIT I PARTIAL DIFFERENTIAL EQUATIONS 12

Formation - Solutions of first order equations - Standard types and Equations reducible to standard types - Lagrange's Linear equation - Solution of linear equations of higher order with constant coefficients - Linear non-homogeneous partial differential equations.

UNIT II FOURIER SERIES 12

Dirichlet's conditions - General Fourier series - Odd and even functions - Half-range Sine and cosine series - Complex form of Fourier series - Parseval's identity - Harmonic Analysis.

UNIT III APPLICATIONS OF PARTIAL DIFFERENTIAL EQUATION 12

Classification of partial differential equations- Method of separation of variables - Solutions of one dimensional wave equation and one-dimensional heat equation - Steady state solution of two- dimensional heat equation - Fourier series solutions in cartesian coordinates.

UNIT IV FOURIER TRANSFORM 12

Fourier integral theorem - Fourier transform pair- Sine and cosine transforms - Properties - Transform of elementary functions - Convolution theorem - Parseval's identity.

UNIT V Z – TRANSFORM AND DIFFERENCE EQUATIONS 12

Z-transform - Elementary properties - Inverse Z-transform - Convolution theorem - Initial and final value theorems - Formation of difference equation - Solution of difference equation using Z transform.

TOTAL: 60 PERIODS

COURSE OUTCOMES:

At the end of the course, students will be able to

- CO1 Form the partial differential equations and solve them using various techniques
- CO2 Find the Fourier constants and frame the Fourier series of periodic functions
- CO3 Classify and solve the initial and boundary value problems such as wave and heat flow equation
- CO4 Compute the Fourier transforms of standard functions and learn the properties
- CO5 Apply the techniques of Z- transform to get the solutions of differential equations

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce students to various materials commonly used in civil engineering construction and their properties

UNIT I STONES – BRICKS – CONCRETE BLOCKS**9**

Stone as building material - Criteria for selection - Tests on stones - Deterioration and Preservation of stone work - Bricks - Classification - Manufacturing of clay bricks - Tests on bricks - Compressive Strength - Water Absorption - Efflorescence - Bricks for special use - Refractory bricks - Concrete blocks - Lightweight concrete blocks - Flyash Bricks.

UNIT II LIME – CEMENT – AGGREGATES – MORTAR**9**

Lime - Preparation of lime mortar - Cement - Ingredients - Manufacturing process - Types and Grades - Properties of cement and Cement mortar - Hydration - Compressive strength - Tensile strength - Fineness- Soundness and consistency - Setting time - fine aggregates - river sand - crushed stone sand - properties - coarse Aggregates - Crushing strength - Impact strength - Flakiness Index - Elongation Index - Abrasion Resistance - Grading-Bulking of fine aggregate - M-Sand.

UNIT III CONCRETE**9**

Concrete - Ingredients - Manufacturing Process - Batching plants -mixing - transporting - placing - compaction of concrete -curing and finishing - Ready mix Concrete - Mix specification - Special Concrete.

UNIT IV TIMBER AND OTHER MATERIALS**9**

Timber - Market forms - Industrial timber- Plywood - Veneer - Thermocol - Panels of laminates - Steel - Aluminum and Other Metallic Materials - Composition - Aluminum composite panel - Market forms - Mechanical treatment - Paints - Varnishes - Distempers - Bitumen.

UNIT V MODERN MATERIALS**9**

Glass - Ceramics - Sealants for joints - Fibre glass reinforced plastic - Clay products -

Refractories - Composite materials - Types - Applications of laminar composites - Fibre textiles- Geomembranes and Geotextiles for earth reinforcement.- Green material, Sustainable material, Nano materials, Construction chemicals, Pavement Tiles - Interlocking concept.

TOTAL: 45 PERIODS

COURSE OUTCOMES

Upon successful completion of course the students will be able to

CO1 Compare the properties of most common and advanced building materials

CO2 summarize the typical and potential applications of lime, cement and aggregates.

CO3 outline the production of concrete and also the method of placing and making of concrete elements.

CO4 Illustrate the applications of timbers and other materials.

CO5 Illustrate the importance of modern material for construction

geological investigations and mining - Coastal protection structures. Investigation of Landslides, causes and mitigation.-Case Studies in India

TOTAL: 45 PERIODS

COURSE OUTCOMES

Upon successful completion of course the students will be able to

- CO1 Develop an understanding about the various physical processes that lead to the formation of geological features and plate tectonics.
- CO2 Identify and categorize minerals based on their appearance and chemical composition
- CO3 Compare the traits that delineate the various types of rocks and their suitability for various engineering applications
- CO4 Relate the structural form of rocks and its implications on its mechanical properties
- CO5 Make use of various field investigation techniques like remote sensing for collecting data on geological conditions on site.

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the basic properties of the fluid, fluid kinematics, fluid dynamics and to analyze and appreciate the complexities involved in solving the fluid flow problems.

UNIT I FLUID PROPERTIES AND FLUID STATICS**9**

Fluid - definition, distinction between solid and fluid - Units and dimensions Properties of fluids - density, specific weight, specific volume, specific gravity, viscosity, compressibility, vapour pressure, capillarity and surface tension - Fluid statics: concept of fluid static pressure, absolute and gauge pressures pressure measurements by manometers-forces on planes - centre of pressure - buoyancy and floatation.

UNIT II FLUID KINEMATICS AND DYNAMICS**9**

Fluid Kinematics - Classification and types of flow - velocity field and acceleration - continuity equation (one and three dimensional differential forms)- stream line-streak line-path line- stream function - velocity potential function - flow net. Fluid dynamics - equations of motion---Euler's equation along streamline - Bernoulli's equation - applications Venturimeter, orifice meter and Pitot tube- linear momentum equation and its application to pipe bend.

UNIT III DIMENSIONAL ANALYSIS AND MODEL STUDIES**9**

Fundamental dimensions - dimensional homogeneity - Rayleigh's method and Buckingham Pi-theorem - dimensionless parameters - similitude and model studies distorted models.

UNIT IV FLOW THROUGH PIPES**9**

Reynold's experiment - laminar flow through circular pipe (Hagen poiseulle's)--hydraulic and energy gradient - flow through pipes - Darcy - Weisbach's equation - pipe roughness - friction factor- Moody's diagram- major and minor losses of flow in pipes pipes in series and in parallel - Equivalent pipe.

UNIT V BOUNDARY LAYER**9**

Boundary layer - definition- boundary layer on a flat plate - laminar and turbulent boundary layer- displacement, energy and momentum thickness - Momentum integral equation-Boundary layer separation and control - drag on flat plate.

COURSE OUTCOMES:

Upon successful completion of course the students will be able to

CO1 Get a basic knowledge of fluids in static, kinematic and dynamic equilibrium.

CO2 Understand and solve the problems related to equation of motion.

CO3 Gain knowledge about dimensional and model analysis.

CO4 Learn types of flow and losses of flow in pipes.

CO5 Understand and solve the boundary layer problems.

L	T	P	C
3	0	0	3

OBJECTIVES:

- To learn the fundamental concepts of Stress, Strain and deformation of solids.
- To know the mechanism of load transfer in beams, the induced stress resultants and deformations.
- To understand the effect of torsion on shafts and springs.
- To analyze plane and space trusses

UNIT I STRESS, STRAIN AND DEFORMATION OF SOLIDS**9**

Simple Stresses and strains - Elastic constants--Relationship between elastic constants - Stress Strain Diagram - Ultimate Stress - Yield Stress - Deformation of axially loaded member - Composite Bars Thermal Stresses - State of Stress in two dimensions - Stresses on inclined planes - Principal Stresses and Principal Planes - Maximum shear stress--Mohr's circle method.

UNIT II TRANSFER OF LOADS AND STRESSES IN BEAMS**9**

Types of loads, supports, beams - concept of shearing force and bending moment - Relationship between intensity of load, Shear Force and Bending moment Shear Force and Bending Moment Diagrams for Cantilever, simply supported and overhanging beams with concentrated load, uniformly distributed load, uniformly varying load and concentrated moment. Theory of Simple Bending - Stress Distribution due to bending moment and shearing force Flitched Beams - Leaf Springs.

UNIT III DEFLECTION OF BEAMS**9**

Elastic curve - Governing differential equation - Double integration method Macaulay's method - Area moment method--conjugate beam method for computation of slope and deflection of determinant beams.

UNIT IV TORSION**9**

Theory of Torsion - Stresses and Deformations in Solid and Hollow Circular Shafts - combined bending moment and torsion of shafts Power transmitted to shaft - Shaft in series and parallel - Closed and Open Coiled helical springs - springs in series and parallel - Design of buffer

springs.

UNIT V ANALYSIS OF TRUSSES

9

Determinate and indeterminate trusses Analysis of pin jointed plane determinate trusses by method of joints, method of sections and tension coefficient - Analysis of Space trusses by tension coefficient method.

TOTAL: 45 PERIODS

COURSE OUTCOMES:

Upon successful completion of the course, students will be able to

- CO1 Understand the fundamental concepts of stress, strain of solids and the stresses in two dimensions
- CO2 Construct shear force and bending moment diagram for determinate beams and understand the concept of simple bending
- CO3 Apply the analytical techniques for computing deflection of members subjected to bending.
- CO4 Solve analytical problems on shafts subjected to torsion and helical springs
- CO5 Solve analytical problems on plane and space trusses

CE1305

SURVEYING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce the concepts of plane and geodetic surveying principles
- To illustrate the various methods of surveying to solve the field problems
- To .categorize the errors and correction in surveying
- To outline the basics of Astronomical Surveying.

UNIT I FUNDAMENTALS OF CONVENTIONAL SURVEYING AND LEVELLING 9

Classifications and basic principles of surveying-- Equipment and accessories for ranging and chaining - Methods of ranging - Compass - Types of Compass Basic Principles- Bearing - Types - True Bearing - Magnetic Bearing Levelling- Principles and theory of Levelling - Datum --Bench Marks - Temporary and Permanent Adjustments- Methods of Levelling- Booking - Reduction - Sources of errors in Levelling Curvature and refraction.

UNIT II THEODOLITE AND TACHEOMETRIC SURVEYING 9

Horizontal and vertical angle measurements - Temporary and permanent adjustments Heights and distances - Tacheometer - Stadia Constants - Analytic Lens-- Tangential and Stadia Tacheometry surveying - Contour - Contouring - Characteristics of contours - Methods of contouring - Tacheometric contouring Contour gradient - Uses of contour plan and map

UNIT III CONTROL SURVEYING AND ADJUSTMENT 9

Horizontal and vertical control- Methods - Triangulation - Traversing - Trigonometric Levelling - Gale,,s table - Trilateration -Concepts of measurements and errors - error propagation and linearization - adjustment methods - least square methods - adjustment of simple triangulation networks.

UNIT IV MODERN SURVEYING

9

Total Station: Digital Theodolite, EDM, Electronic field book-- Advantages - Parts and accessories - working principle - Observables - Errors COGO functions - Field procedure and applications. GPS: Advantages System components - Signal structure - Selective availability and antispoofing - receiver components and antenna - Planning and data acquisition - Data processing Errors in GPS - Field procedure and applications.

UNIT V ADVANCED TOPICS IN SURVEYING

9

Route Surveying - Reconnaissance - Route surveys for highways, railways and waterways - Simple curves - Compound and reverse curves - Transition curves- Setting out different methods of simple curve - Vertical curves - Hydrographic surveying - Tides - MSL Sounding methods - - Astronomical terms and definitions Celestial coordinate systems - different time systems Field observations and determination of azimuth by altitude and hour angle method.

TOTAL: 45 PERIODS

COURSE OUTCOMES

Upon successful completion of the course, students will be able to

- CO1 Understand the rudiments of various surveying and its principles.
- CO2 Infer the concepts of Theodolite and Tacheometric Surveying.
- CO3 Narrate the procedure for establishing horizontal and vertical control and its adjustment procedure.
- CO4 Describe the basics of Modern Surveying
- CO5 Outline the knowledge in Route surveying, Hydrographic surveying and Field Astronomical surveying

**CE1311 COMPUTER AIDED BUILDING DRAWING
LABORATORY**

L	T	P	C
0	0	4	2

OBJECTIVES:

- To introduce the students to draft the plan, elevation and sectional views of buildings in accordance with development and control rules satisfying orientation and functional requirements as per National Building Code.

LIST OF EXPERIMENTS

1. Principles of planning, orientation and complete joinery details (Paneled and Glazed Doors and Windows).
2. Buildings with load bearing walls.
3. Buildings with sloping roof.
4. R.C.C. framed structures.
5. Industrial buildings - North light roof structures.

TOTAL:60 PERIODS

COURSE OUTCOMES:

Upon successful completion of the course, students will be able to

- CO 1 Draft Paneled and Glazed Doors and Windows.
 CO 2 Sketch front, top & side views of Buildings with load bearing walls.
 CO 3 Sketch Buildings with sloping roof.
 CO 4 Sketch R.C.C. framed structures.
 CO 5 Draft Industrial buildings - North light roof structures.

CE1312

SURVEYING LABORATORY

L	T	P	C
0	0	4	2

OBJECTIVE:

- At the end of the course the student will possess knowledge about Survey field techniques

LIST OF EXPERIMENTS:

Chain Survey

1. Study of chains and its accessories, Aligning, Ranging, Chaining and Marking Perpendicular offset
2. Setting out works - Foundation marking using tapes single Room and Double Room

Compass Survey and Plan table Survey

3. Compass Traversing - Measuring Bearings & arriving included angles
4. Plan table Surveying - Measuring areas & Distance between inaccessible points

Levelling - Study of levels and levelling staff

5. Fly levelling using Dumpy level & Tilting level

6. Check levelling

Theodolite - Study of Theodolite

7. Measurements of horizontal angles by reiteration and repetition and vertical angles

8. Determination of elevation of an object using single plane method when base is accessible/inaccessible.

Tacheometry – Tangential system – Stadia system

9. Determination of Tacheometric Constants

10. Heights and distances by stadia Tacheometry

11. Heights and distances by Tangential Tacheometry

Total Station - Study of Total Station, Measuring Horizontal and vertical angles

12. Traverse using Total station and Area of Traverse

13. Determination of distance and difference in elevation between two inaccessible points using Total station

TOTAL: 60 PERIODS

COURSE OUTCOMES:

CO1 Make use of chain for measuring distance in field

CO2 Examine the area of traverse and detect local attraction using compass surveying & Plane table Surveying.

CO3 Examine the elevation of various points and carryout longitudinal and cross sectioning using level

CO4 Examine the heights and distances using Theodolite and systems of tacheometry.

CO5 Make use of total station for measuring distance in field

LIST OF EQUIPMENTS FOR A BATCH OF 30 STUDENTS

S.No	Description of Equipment	Quantity
1.	Total Station	3 Nos
2.	Theodolites	At least 1 for every 5 students
3.	Dumpy level / Filling level	At least 1 for every 5 students
4.	Pocket stereoscope	1
5.	Ranging rods	1 for a set of 5 students
6.	Levelling staff	

7.	Cross staff	
8.	Chains	
9.	Tapes	
10.	Arrows	
11.	Prismatic Compass	10 nos
12.	Surveyor Compass	2 nos
13.	Survey grade or Hand held GPS	3 nos

HS1321 INTERPERSONAL SKILLS - LISTENING AND SPEAKING

L	T	P	C
0	0	2	1

OBJECTIVES:

The course will enable learners to

- Equip students with the English language skills required for the successful undertaking of academic studies with primary emphasis on academic speaking and listening skills.
- Provide guidance and practice in basic general and classroom conversation and to engage in specific academic speaking activities.
- Improve general and academic listening skills
- Make effective presentations

UNIT I LISTENING AS A KEY SKILL

6

Listening as a key skill- its importance- speaking - give personal information - ask for personal information - express ability - enquire about ability - ask for clarification Improving pronunciation- pronunciation basics – stressing syllables and speaking clearly - intonation patterns - conversation starters: small talk.

UNIT II LISTEN TO A PROCESS INFORMATION

6

Listen to a process information- give information, as part of a simple explanation – taking lecture notes - preparing to listen to a lecture - articulate a complete idea as opposed to producing fragmented utterances compare and contrast information and ideas from multiple sources- converse with reasonable accuracy over a wide range of everyday topics

SEMESTER IV

MA1471

NUMERICAL METHODS

L	T	P	C
3	1	0	4

OBJECTIVES:

- To introduce the basic concepts of solving algebraic and transcendental equations.
- To introduce the numerical techniques of interpolation in various intervals in real life situations.
- To impart the knowledge of various techniques of differentiation and integration.
- To compute the solution of differential equation with initial and boundary conditions.
- To understand the knowledge of finding the solution for the boundary value problems in Partial differential equations using finite difference methods.

UNIT I SOLUTION OF EQUATIONS AND EIGEN VALUE PROBLEMS 12

Solution of algebraic and transcendental equations: Fixed point iteration method - Newton Raphson method - Solution of linear system of equations: Gauss elimination method - Pivoting – Gauss Jordan method - Inverse of a matrix by Jordan Method - Iterative methods of Gauss Jacobi and Gauss Seidel - Dominant Eigen value of a matrix by Power method.

using numerical techniques..

CO5 Solve using finite difference techniques for the solution of two dimensional Laplace's and Poisson's equations on rectangular domain and one dimensional heat and wave equation.

CE1401

APPLIED HYDRAULIC ENGINEERING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce the students to various hydraulic engineering problems like open channel flows and hydraulic machines.
- At the completion of the course, the student should be able to relate the theory and practice of problems in hydraulic engineering.

UNIT I	UNIFORM FLOW	9
Definition and differences between pipe flow and open channel flow - Types of Flow Properties of open channel - Velocity distribution in open channel Steady uniform flow: Chezy's equation, Manning equation - Best hydraulic sections for uniform flow - Wide open channel - Specific energy and specific force - Critical flow.		
UNIT II	GRADUALLY VARIED FLOW	9
Dynamic equations of gradually varied flows - Types of flow profiles---Classifications: Computation by Direct step method and Standard step method - Control section - Break in Grade - Computation.		
UNIT III	RAPIDLY VARIED FLOW	9
Application of the momentum equation for RVF - Hydraulic jumps - Types Energy dissipation - Celerity - Rapidly varied unsteady flows (positive and negative surges)		
UNIT IV	TURBINES	9
Impact of Jet on flat, curved plates, Stationary and Moving -Classification of Turbines - Pelton wheel - Francis turbine - Kaplan turbine Specific speed - Characteristic Curves of Turbines Draft tube and cavitation.		
UNIT V	PUMPS	9
Classification of Pumps - Centrifugal pumps - Work done - Minimum speed to start the pump NPSH - Multistage pumps - Characteristics curve - Reciprocating pumps - Negative slip - Indicator diagrams and its variations - Air vessels Savings in work done.		

TOTAL: 45 PERIODS

COURSE OUTCOMES:

Upon successful completion of course the students will be able to

CO1 Apply their knowledge of fluid mechanics in addressing problems in open channels.

CO2 Identify an effective section for flow in different cross sections ·

CO3 Solve problems in uniform, gradually and rapidly varied flows in steady state conditions.

CO4 Understand the principles, working and application of turbines ··

CO5 Understand the principles, working and application of pumps ··

4. Jain.A.K.,2016 , *Fluid Mechanics (Including Hydraulic Machines)*, Khanna Publishers, Twelfth Edition.
5. Subramanya.K.,2010, *Fluid Mechanics and Hydraulic Machines*, Tata McGraw Hill Education Private Limited, New Delhi.

CE1402**CONCRETE TECHNOLOGY**

L	T	P	C
3	0	0	3

OBJECTIVES:

- To impart knowledge to the students on the properties of materials for concrete by suitable tests, mix design for concrete and special concretes.

UNIT I CONSTITUENT MATERIALS**9**

Cement - Different types - Chemical composition and Properties - Hydration of cement Tests on cement - IS Specifications - Aggregates - Classification Mechanical properties and tests as per BIS - Grading requirements - Water Quality of water for use in concrete.

UNIT II CHEMICAL AND MINERAL ADMIXTURES**9**

Accelerators - Retarders - Plasticizers - Super plasticizers - Water proofers - Mineral Admixtures like Fly Ash, Silica Fume, Ground Granulated Blast Furnace Slag and Metakaoline -

CE1403 CONSTRUCTION TECHNIQUES, EQUIPMENT AND PRACTICES

L	T	P	C
3	0	0	3

OBJECTIVES:

- The main objective of this course is to make the student aware of the various construction techniques, practices and the equipment needed for different types of construction activities.

UNIT I CONSTRUCTION TECHNIQUES 9

Structural systems - Load Bearing Structure - Framed Structure -Load transfer mechanism - floor system - Development of construction techniques - High rise Building Technology -- Seismic effect 3D Printing-Hybrid Concrete Construction- Environmental impact of materials - responsible sourcing - Eco Building (Green Building) - Material used - Construction methods - Natural Buildings - Passive buildings - Intelligent(Smart) buildings - Meaning - Building automation - Energy efficient buildings for various zones-Case studies of residential, office buildings and other buildings in each zones

UNIT II CONSTRUCTION PRACTICES 9

Specifications, details and sequence of activities and construction co-ordination - Site

Clearance - Marking - Earthwork - masonry - stone masonry - Bond in masonry - concrete hollow block masonry - flooring - damp proof courses - construction joints - movement and expansion joints - pre cast pavements - Building foundations - basements - temporary shed - centering and shuttering - slip forms - scaffoldings - de-shuttering forms - Fabrication and erection of steel trusses - frames - braced domes - laying brick – weather and water proof - roof finishes - acoustic and fire protection.

UNIT III SUB STRUCTURE CONSTRUCTION 9

Techniques of Box jacking - Pipe Jacking under water construction of diaphragm walls and basement-Tunneling techniques - Piling techniques - well and caisson - sinking cofferdam cable anchoring and grouting - driving diaphragm walls, sheet piles - shoring for deep cutting well points Dewatering and stand by Plant equipment for underground open excavation.

UNIT IV SUPER STRUCTURE CONSTRUCTION 9

Launching girders, bridge decks, off shore platforms - special forms for shells techniques for heavy decks - in-situ pre-stressing in high rise structures, Material handling - erecting light weight components on tall structures - Support structure for heavy Equipment and conveyors - Erection of articulated structures, braced domes and space decks.

UNITV CONSTRUCTION EQUIPMENT 9

Selection of equipment for earth work - earth moving operations types of earthwork equipment - tractors, motor graders, scrapers, front end loaders, earth movers - Equipment for foundation and pile driving. Equipment for compaction, batching, mixing and concreting Equipment for material handling and erection of structures - types of cranes -Equipment for dredging, trenching, tunneling.

TOTAL: 45 PERIODS

COURSE OUTCOMES

Upon successful completion of course the students will be able to

CO1 Understand various construction techniques

CO2 illustrate of the construction practices followed in various construction works

CO3 Know about various construction techniques used in underground level construction works

CO4 Outline about various construction practices used in elevated level construction

works.

CO5 Aware of the various construction equipment and its applications

CE1404

SOIL MECHANICS (Theory cum Lab)

L	T	P	C
3	0	2	4

OBJECTIVES:

- To impart knowledge to classify the soil based on index properties and to assess their engineering properties based on the classification.
- To familiarize the students about the fundamental concepts of compaction, flow through soil, stress transformation, stress distribution, consolidation and shear strength of soils.
- To impart knowledge of design of both finite and infinite slopes.

UNIT I SOIL CLASSIFICATION AND COMPACTION

9 + 6

History - formation and types of soil - composition - Index properties -Classification - BIS - AASHTO - Unified classification system - phase relationship - Compaction theory - laboratory and field technology - field Compaction method - factors influencing compaction.

Specific gravity of soil solids
Grain size distribution - Sieve analysis
Grain size distribution - Hydrometer analysis
Liquid limit and Plastic limit tests
Shrinkage limit and Differential free swell tests

DETERMINATION OF INSITU DENSITY AND COMPACTION CHARACTERISTICS

Field density Test (Sand replacement method and core cutter method)
Determination of moisture - density relationship using standard Proctor compaction test.
Determination of relative density (Demonstration only)

DETERMINATION OF ENGINEERING PROPERTIES

Permeability determination (constant head and falling head methods)
One dimensional consolidation test (Determination of Co-efficient of consolidation only)
Direct shear test in cohesionless soil
Unconfined compression test in cohesive soil
Laboratory vane shear test in cohesive soil
Tri-axial compression test in cohesionless soil (Demonstration only)
California Bearing Ratio Test

COURSE OUTCOMES:

Upon successful completion of course the students will be able to

- CO1 Summarize the classification of soil and soil properties
- CO2 Describe the effective stress concepts and permeability of soil
- CO3 Outline stress distribution of soil
- CO4 Explain about shear strength of soil
- CO5 Narrate the slope stability in soil and slope protection measures

TEXTBOOKS:

LIST OF EQUIPMENTS FOR A BATCH OF 30 STUDENTS

Sl.No. Description of Equipment Quantity

- | | | |
|----|--------|--------|
| 1. | Sieves | 2 sets |
|----|--------|--------|

2.	Hydrometer	2 sets
3.	Liquid and Plastic limit apparatus	2 sets
4.	Shrinkage limit apparatus	3 sets
5.	Proctor Compaction apparatus	2 sets
6.	UTM of minimum of 20kN capacity	1
7.	Direct Shear apparatus	1
8.	Thermometer	2
9.	Sand replacement method accessories and core cutter method accessories	
10.	Tri-axial Shear apparatus	1
11.	Three Gang Consolidation test device	1
12.	Relative Density apparatus	1
13.	Van Shear apparatus	1
14.	Weighing machine - 20kg capacity	1 No
	Weighing machine - 1kg capacity	3 No

CE1405

STRENGTH OF MATERIALS II

L	T	P	C
3	0	0	3

OBJECTIVES:

- To know the method of finding slope and deflection of beams and trusses using energy theorems and to know the concept of analysing indeterminate beam
- To estimate the load carrying capacity of columns, stresses due to unsymmetrical bending and various theories for failure of material.

UNIT I ENERGY PRINCIPLES

9

Strain energy and strain energy density - strain energy due to axial load (gradual, sudden and impact loadings) , shear, flexure and torsion - Castigliano's theorems - Maxwell's reciprocal theorem - Principle of virtual work - unit load method Application of energy theorems for computing deflections in determinate beams , plane frames and plane trusses - lack of fit and temperature effects Williot Mohr's Diagram.

UNIT II INDETERMINATE BEAMS

9

2. Rattan.S.S., *Strength of Materials*, Tata McGraw Hill Education Pvt. Ltd., New Delhi,
3. Punmia B.C., Ashok Kumar Jain and Arun Kumar Jain., 2017, *Theory of Structures (SMTS) Vol - II*, Laxmi Publishing Pvt Ltd, New Delhi.
4. Basavarajiah and Mahadevapa., 2016, *Strength of Materials*, University press, Hyderabad.

CE1411 STRENGTH OF MATERIALS LABORATORY

L	T	P	C
0	0	4	2

OBJECTIVES:

- To expose the students to the testing of different materials under the action of various forces and determination of their characteristics experimentally

LIST OF EXPERIMENTS:

1. Tension test on steel rod
2. Compression test on wood
3. Double shear test on metal
4. Torsion test on mild steel rod
5. Impact test on metal specimen (Izod and Charpy)
6. Hardness test on metals (Rockwell and Brinell Hardness Tests)
7. Deflection test on metal beam
8. Compression test on helical spring
9. Deflection test on carriage spring

TOTAL: 60 PERIODS

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

Sl. No.	Description of Equipment	Quantity
1.	UTM of minimum 400 kN capacity	1
2.	Torsion testing machine for steel rods	1
3.	Izod impact testing machine	1
4.	Hardness testing machine (any 2) i. Rockwell ii. Brinell iii. Vicker"s	1 each
5.	Beam deflection test apparatus	1
6.	Extensometer	1
7.	Compressometer	1
8.	Dial gauges	few
9.	Le Chatelier"s apparatus	2
10	Vicat"s apparatus	2
11	Mortar cube moulds	10

COURSE OUTCOMES

Upon successful completion of course the students will be able to

CO1 practice in universal testing machine to determine the maximum strength of the materials.

CO2 Practice in torsion testing machine to determine the Stiffness for member subjected to Torsion.

CO3 Infer the type of springs and their load carrying capacity.

CO4 Appraise the characteristics of ductile materials by using hardness, Impact test..

CO5 Appraise the properties of cement and brick by conducting various tests..

HS1421 AN INTRODUCTION TO ADVANCED READING AND WRITING

L	T	P	C
0	0	2	1

OBJECTIVES:

The course will enable learners to

- To strengthen the reading skills of students of engineering.
- To enhance their writing skills with specific reference to technical writing
- To develop their critical thinking skills.
- To provide more opportunities to develop their project and proposal writing skills

UNIT I EFFECTIVE READING 6

Reading - Strategies for effective reading-Use glosses and footnotes to aid reading comprehension- Read and recognize different text types-Predicting content using photos and title. Reading-Read for details-Use of graphic organizers to review and aid comprehension.

UNIT II CRITICAL READING 6

Reading- Understanding pronoun reference and use of connectors in a passage- speed reading techniques. Reading- Genre and Organization of Ideas- Reading- Critical reading and thinking- understanding how the text positions the reader.

UNIT III PARAGRAPH WRITING 6

Writing-Plan before writing- Develop a paragraph: topic sentence, supporting sentences, concluding sentence.-Write a descriptive paragraph Writing-State reasons and examples to support ideas in writing- Write a paragraph with reasons and examples- Write an opinion paragraph

UNIT IV ESSAY WRITING 6

Writing- Elements of a good essay-- Types of essays- descriptive-narrative- issue-based- argumentative-analytical.

UNIT V EFFECTIVE WRITING 6

Writing- Email writing- visumes - Job application- Report Writing Project writing-Writing convincing proposals

TOTAL: 30 PERIODS

COURSE OUTCOMES:

At the end of the course, students will be able to

- CO1 Understand how the text positions the reader
- CO2 Develop critical thinking while reading a text
- CO3 Develop a descriptive paragraph
- CO4 Make use of sentence structures effectively when creating an essay.
Demonstrate proper usage of grammar in writing E-Mails, Job application and project proposals
- CO5
